

Overview:

Project Server 2013 provides project management, work management, and portfolio management capabilities for the enterprise. With Project Server 2013, organizations can effectively initiate, select, plan, and deliver projects while tracking time and budget. Project Server 2013 also provides extensive reporting capabilities through Excel Services in SharePoint Server 2013 for reporting on all aspects of the project lifecycle. Project Server 2013 is built on SharePoint Server 2013.

Microsoft Project Server 2013 is a flexible on-premises solution for project portfolio management (PPM) and everyday work. Team members, project participants, and business decision makers can get started, prioritize project portfolio investments and deliver the intended business value from virtually anywhere. Requires SharePoint 2013, sold separately.

You can earn PDUs for Project Management Professional (PMP®) Certification Prep exam after attending this course at Koenig.
